PROFESSIONAL SUMMARY

Detail-oriented and analytical **B.Tech graduate (First Class)** with an advanced **Post Graduate Diploma in Computer Applications (PGDCA)** and a comprehensive background in data systems. Proven capability in managing IT infrastructure, configuring hardware/software networks, and analyzing system performance. Demonstrates over 5 years of dedicated experience managing complex analytical workflows, system administration tasks, and technical problem-solving. Adept at maintaining network integrity, executing data-driven troubleshooting, and optimizing institutional IT workflows.

KEY SKILLS

Networking & Systems: Network Administration, Hardware & Software Troubleshooting, System Configuration, PGDCA Frameworks.

Database & Systems Management: SQL, Database Management, Data Architecture, Excel, Google Colab.

Programming & Scripting: Python (Pandas, NumPy, Matplotlib, Seaborn), Automation Scripting, Command-Line Basics.

Core Competencies: Analytical Thinking, Technical Problem Solving, Infrastructure Optimization, Time Management, Strict Deadline Adherence.

PROFESSIONAL EXPERIENCE & CAREER DEVELOPMENT

Technical Systems & Network Administrator (Independent Contractor / Consultant)

Feb 2019 – Jun 2025

- Managed end-to-end IT hardware deployment, operating system installations, and local area network (LAN) configurations for private client setups and educational systems.
- Utilized rigorous logical reasoning and quantitative analysis frameworks to diagnose, troubleshoot, and resolve complex software errors and system bottlenecks under strict time constraints.
- Maintained and optimized data repositories using advanced Excel functions and system tools, ensuring 100% data integrity and high availability.
- Structured and followed a disciplined daily operations schedule to manage routine system diagnostics, security updates, and performance monitoring.

PROJECTS

Project 1: Laptop Price Prediction & System Architecture Analysis (ML Capstone)

- Cleaned and transformed raw hardware technical specifications into structured inputs for over 85 engineered system features.
- Evaluated performance metrics across hardware components including RAM, SSD/HDD splits, PPI, and CPU/GPU brands to model pricing architectures.
- Utilized Scikit-Learn algorithms (Random Forest, SVR, KNN) and optimized parameters using GridSearchCV, achieving a hardware pricing prediction accuracy of $R^2 = 0.84$.

Project 2: System Performance & Quality Analytics Dashboard

- Analyzed complex infrastructure and sensory datasets using Python (Pandas, Seaborn, Matplotlib) and Power BI to identify critical operational variables.
- Engineered custom technical metrics using DAX to isolate system defects and visualize performance degradation across multi-variable categories.
- Built real-time interactive simulation parameters allowing administrators to instantly model how component adjustments affect overall system health metrics.

EDUCATION

Post Graduate Diploma in Computer Applications (PGDCA) | Alpha Computers, Vizianagaram | Aggregate: 82% (First Class)

B.Tech in Mechanical Engineering | MVGR College of Engineering | 2018 | Score: 72.8% (First Class)

Data Science Certification | Odin School | 2025

Intermediate (MPC) | NRI Academy, BIEAP | 2014 | Score: 94.2%

SSC (Class X) | St. Joseph's English Medium High School, Vizianagaram | 2012 | CGPA: 9.7/10

LANGUAGES

English (Fluent), Telugu (Native), Hindi (Professional)
